| structure                 | <u>leg</u> : consisting of a 2 mm thick metal profile with a rectangular cross-section W. 2"3/4 D. 1". The leg is fully welded and epoxy powder coated. Welded to the leg is a vertical metal upright, 1.5 mm thick, with a cross-section of W. 3/4" D. 3/4", off-centre compared to the leg frame, provided with special joints for fixing the structural modesty panel. The leg is equipped with plastic adjustment feet that allow +10 mm adjustment for floor levelling.                                                                                             |        |        |               |        |        |                          |        |        |
|                           | <u>beams</u> : two per desk. Made of 2 mm thick metal, L. 2" H. 1"1/8, fixed to the metal legs with screws. Equipped for the attachment of a cable tray.                                                                                                                                                                                                                                                                                                                                                                                                                 |        |        |               |        |        |                          |        |        |
|                           | <u>structural modesty panel</u> :<br><u>melamine</u> : made of 18 mm thick chipboard (density 720 kg/m <sup>3</sup> , formaldehyde emission compliant with EU Regulation 2023/1464 and EPA TSCA Title VI), faced with anti-reflex melamine resins and edged with ABS (2 mm thick with rounded edges). The modesty panel has a height of 16"1/4 and recesses 11"3/8 from the visitor side and 27"1/8 from the operator side. The useful space between modesty panel and top for cable passage is 3"1/4. Assembly is by means of quick-release spacers (matching the leg). |        |        |               |        |        |                          |        |        |
| top                       | <u>melamine</u> : 18 mm thick chipboard density 720 kg/m <sup>3</sup> , formaldehyde emission compliant with EU Regulation 2023/1464 and EPA TSCA Title VI), faced with anti-reflex melamine resins and edged with ABS (2 mm thick with rounded edges). The top is equipped on the lower side with threaded bushes and is fixed to the legs with screws. On the upper side of each leg there are two PVC spacers (H. 1/4") to support the worktop.                                                                                                                       |        |        |               |        |        |                          |        |        |
|                           | <u>painted glass</u> : 12 mm thick, toughened in accordance with EN 12150 with flat polished edges, painted with water-based colours on the underside. For the white and dove-grey finishes the glass is extra-clear, for the black finish the glass is float. The top has studs and is attached to the legs with screws.                                                                                                                                                                                                                                                |        |        |               |        |        |                          |        |        |
|                           | <u>etched painted glass</u> : 12 mm thick, tempered in accordance with EN 12150 with flat polished edges, acid-etched on the top side and painted with water-based colours on the underside. For the white and dove-grey finishes the glass is extra-clear, for the black finish the glass is float. The top has studs and is attached to the legs with screws.                                                                                                                                                                                                          |        |        |               |        |        |                          |        |        |
| eco-leather modesty panel | <u>eco-leather</u> : made of 18 mm thick chipboard (density 720 kg/m <sup>3</sup> , formaldehyde emission class E1, meets CARB requirements), faced with antireflection melamine resins and upholstered in eco-leather.                                                                                                                                                                                                                                                                                                                                                  |        |        |               |        |        |                          |        |        |
